CLAIMS (As amended by response dated July 25, 2005)

1. (Currently Amended) A head for an electric toothbrush, comprising:

a first bristle support which is rotatable about an axis;  
a plurality of first bristles extending from a surface of the first bristle support, all of the first bristles extending from the first bristle support extending in a perpendicular direction from the first bristle support;

a second bristle support pivotally mounted on said first bristle support; and

a plurality of second bristles extending from a surface of the second bristle support at an acute angle to the surface, wherein at least some of the second bristles are angled away from at least some of the first bristles, the surfaces of the first and second bristle supports being capable of lying in substantially a same plane during operation of the electric toothbrush.

2. (Original) The head of claim 1, wherein the first bristle support is rotatable in an oscillating manner about the axis.

3. (Cancelled)

4. (Previously Presented) The head of claim 1, wherein at least some of the second bristles are angled towards at least some of the first bristles.

5. (Cancelled)

6. (New) The head of claim 2, wherein the second bristle support comprises a pivot bar mounted within an opening in said first bristle support.

7. (New) The head of claim 6, wherein the bristles on opposite sides of the pivot bar are angled in opposite directions.
